

Supplementary Data

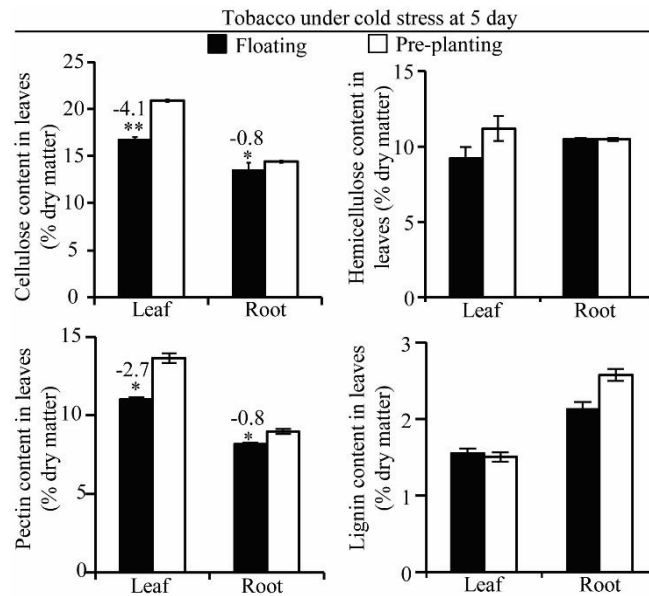

Fig. S1: The contents of cellulose, hemicellulose, pectin and lignin in floating and pre-planting tobacco at 5 days under cold stress (% dry matter) (n=3). Data represent means from at least 5-10 tobacco plants \pm SE. Double asterisks (** $P < 0.01$) single asterisk (* $P < 0.05$) stand for the significant difference between floating and pre-planting tobacco.
